WHAT IS CLAIMED IS:

- 1. Hybrid maize seed designated 37Y15, representative seed of said hybrid 37Y15 having been deposited under ATCC accession number _____.
- 2. A maize plant, or its parts, produced by the seed of claim 1.
- 3. Pollen of the plant of claim 2.
- 4. An ovule of the plant of claim 2.
- A tissue culture of regenerable cells of a hybrid maize plant 37Y15, representative seed of said hybrid maize plant 37Y15 having been deposited under ATCC accession number _____, wherein the tissue regenerates plants capable of expressing all the morphological and physiological characteristics of said hybrid maize plant 37Y15.
- 6. A tissue culture according to claim 5, the cells or protoplasts being from a tissue selected from the group consisting of leaves, pollen, embryos, roots, root tips, anthers, silks, flowers, kernels, ears, cobs, husks, and stalks.
- 7. A maize plant, or its parts, regenerated from the tissue culture of claim 5 and capable of expressing all the morphological and physiological characteristics of hybrid maize plant 37Y15, representative seed having been deposited under ATCC accession number ______.
- 8. The maize plant of claim 2 wherein said plant is male sterile.
- 9. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 2 as a source of said breeding material.
- 10. The maize plant breeding program of claim 9 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing,

pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.

- A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 2, said maize plant capable of expressing a combination of at least two 37Y15 traits selected from the group consisting of: excellent yield potential, strong stalks, strong roots, good silage yield potential, suited to the Northcentral region of the United States, and a relative maturity of approximately 99 based on the Comparative Relative Maturity Rating System for harvest moisture of grain.
- 12. A hybrid maize plant according to claim 2, wherein the genetic material of said plant contains one or more transgenes.
- 13. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 12 as a source of said breeding material.
- 14. The maize plant breeding program of claim 13 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
- 15. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 12, said maize plant capable of expressing a combination of at least two 37Y15 traits selected from the group consisting of: excellent yield potential, strong stalks, strong roots, good silage yield potential, suited to the Northcentral region of the United States, and a relative maturity of approximately 99 based on the Comparative Relative Maturity Rating System for harvest moisture of grain.
- 16. A hybrid maize plant according to claim 2, wherein the genetic material of said plant contains one or more genes transferred by backcrossing.

- 17. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 16 as a source of said breeding material.
- 18. The maize plant breeding program of claim 17 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
- 19. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 16, said maize plant capable of expressing a combination of at least two 37Y15 traits selected from the group consisting of: excellent yield potential, strong stalks, strong roots, good silage yield potential, suited to the Northcentral region of the United States, and a relative maturity of approximately 99 based on the Comparative Relative Maturity Rating System for harvest moisture of grain.
- 20. A maize plant, or its parts, having all the morphological and physiological characteristics of the plant of claim 2.
- 21. The maize plant of claim 20 wherein said maize plant is male sterile.
- 22. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 20 as a source of said breeding material.
- 23. The maize plant breeding program of claim 22 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
- 24. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 20, said maize plant capable of expressing a

combination of at least two 37Y15 traits selected from the group consisting of: excellent yield potential, strong stalks, strong roots, good silage yield potential, suited to the Northcentral region of the United States, and a relative maturity of approximately 99 based on the Comparative Relative Maturity Rating System for harvest moisture of grain.

- 25. A hybrid maize plant according to claim 20, wherein the genetic material of said plant contains one or more transgenes.
- 26. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 25 as a source of said breeding material.
- 27. The maize plant breeding program of claim 26 wherein plant breeding techniques are selected from the group consisting of: recurrent selection, backcrossing, pedigree breeding, restriction fragment length polymorphism enhanced selection, genetic marker enhanced selection, and transformation.
- 28. A maize plant, or its parts, wherein at least one ancestor of said maize plant is the maize plant, or its parts, of claim 25, said maize plant capable of expressing a combination of at least two 37Y15 traits selected from the group consisting of: excellent yield potential, strong stalks, strong roots, good silage yield potential, suited to the Northcentral region of the United States, and a relative maturity of approximately 99 based on the Comparative Relative Maturity Rating System for harvest moisture of grain.
- 29. A hybrid maize plant according to claim 20, wherein the genetic material of said plant contains one or more genes transferred by backcrossing.
- 30. A method for developing a maize plant in a maize plant breeding program using plant breeding techniques, which include employing a maize plant, or its parts, as a source of plant breeding material, comprising: obtaining the maize plant, or its parts, of claim 29 as a source of said breeding material.
